

1. Inputs: horizontal mean profiles for h , q_t

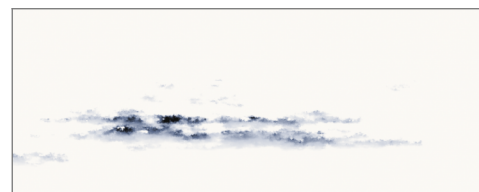

$L = 20.48$ km (outer scale)
 $\ell_s = 30$ m (spheroscale)
 $\varpi = 0.02$ (intermittency)

2. Cascade: add perturbations at every size class

3. Diagnose using
saturation adjustment

$q_c + q_i$
(also T , p , q_v)
